Flipped Class			
Programme & Branch	B.E - MECHANICAL ENGINEERING	Year/Sec/Sem	V
Course Code & Name	50 ME E14 – PRODUCT DESIGN FOR MANUFACTURING	Date	17.08.2022

The video link for the topic GEOMETRIC DIMENSIONING AND TOLERANCING is <https://www.youtube.com/watch?v=-3tN7KvDUjQ>. All the students are requested to listen the video and come prepared for the discussion to be held on 20.08.2022 (Third Hour) in our classroom Hall Number 201 in Nano Block.

Flipped Class Activity Report			
Programme & Branch	B.E - MECHANICAL ENGINEERING	Year/Sec/Se m	V
Course Code & Name	50 ME E14 – PRODUCT DESIGN FOR MANUFACTURING	Date Hour	20.08.2022 3rd Hour

Questions:

- 1) What is the difference between General Dimensioning and Geometric Dimensioning & Tolerance?
- 2) What is the need of GD & T?
- 3) Write down the step by step approach in GD&T.
- 4) What is position tolerance in GD&T?
- 5) Define Datum.
- 6) Define Feature Control frame.

The above questions have been asked to the students and they shared their answers. All the students answered questions no. 1, no.2 and no.3 correctly. But few students answered questions No. 4 and 5 correctly. So, I discussed the non-answered topic in the classroom.

Flipped Class – Questions and Answers			
Programme & Branch	B.E - MECHANICAL ENGINEERING	Year/Sec/Se m	V
Course Code & Name	50 ME E14 – PRODUCT DESIGN FOR MANUFACTURING	Date Hour	20.08.2022 3rd Hour

Answers:

- 1) General Dimensioning control size of the part and Geometric Dimensioning controls the shape of the part.
- 2) With functional assemblies, multi-part products, or parts with complex functionality, it is crucial that all components work well together. All relevant fits and features need to be specified in a way that impacts the manufacturing process and its related investments the least, while still guaranteeing functionality. Tightening tolerances by a factor two can raise the costs twofold or even more, due to higher reject rates and tooling changes. GD&T is the system that allows developers and inspectors to optimize functionality without increasing cost.
- 3) Identify Your Functional Features, Choose Your Controls, Define Your Tolerances, Define Your Datum References, Designate Your Datum Alignments
- 4) Position Tolerance (symbol: \star) is a geometric dimensioning and tolerancing (GD&T) location control used on engineering drawings to specify desired location, as well as allowed deviation to the position of a feature on a part.
- 5) A datum is a plane, a straight line, or a point that is used as a reference when processing a material or measuring the dimensions of a target.
- 6) A feature control frame is used in GD&T to describe the conditions and tolerances of a geometric control on a part's feature. The feature control frame consists of four main pieces of information: GD&T symbol or control symbol. Tolerance zone shape and dimensions.

SOME14 - Product Design for Manufacturing.

1. General dimensioning control size of the part and
2. Geometric dimensioning control the shape of the part.

2. With functional assemblies, multi part products or part with complex shapes or functionality, it is crucial that all component work well together.

3. Identify your functional features, choose your controls, define your tolerance, Define your datum reference and at last designate your datum alignment.

4. A datum plane is a straight line, or a point that is used as a reference with processing a material or measuring the dimension of a target.

5. A feature control frame is used to in GD&T to describe the conditions of the conditions and tolerances of a geometric control on a part features. A feature control frame consist of four main pieces of information. That is GD&T symbol or control symbol, tolerance zone shape and dimension value.

CHOKKALINGAM. C

73772011409

III / A SEC.

SOME E14 - PRODUCT
DESIGN FOR
MANUFACTURING.

1. ✓ General dimensioning Control size of the part and Geometric
Dimensioning Control the size of the part.

2. In multipart products or part with complex shapes or functionality
✓ it is critical that all component work well together.

3. The steps involved are

- i) Identify your functional features.
- ii) Choose your controls.
- iii) Define your tolerance.
- iv) Define your datum reference.
- v) Designate your datum alignment.

4. A datum plane is a straight line, or a point that is used as a reference with processing a material or measuring the dimension of a target.

5. A feature control frame is used in GD&T to describe the coordinates of the condition and tolerance of a Geometric Control on a part feature. A feature control frame consists of four main pieces of information i.e.

i) GD&T symbol or control symbol.

ii) zone shape.

iii) tolerance

iv) Dimension value.
